APPLICATION FOR REACT DEVELOPER POSITION

Dear Hiring Manager,

I am excited to apply for the **React Developer** position. With over 4.6 years of experience in web development, I have built a strong foundation in front-end technologies including React.js, React Native, Redux, JavaScript, HTML5, CSS3, and TypeScript. I am also currently expanding my expertise in AngularJS and RedwoodJS.

During my tenure at Koru UX Designs, I developed a chart-based health tracker, allowing healthcare professionals to monitor client vitals over time and perform predictive analyses. I also evaluated and implemented state management libraries, optimizing application performance. Additionally, my experience in Redwood.JS and Storybook enabled me to build migration schemas and streamline UI consistency.

Previously, at Ken42 EdTech, I led the development of an Academic Management Module, enhancing faculty onboarding and planning. I also improved the Lighthouse performance score from 40 to 85+ by optimizing API calls and reducing load times. My experience integrating Express.js, SOQL, and payment gateways further strengthens my ability to contribute to full-stack solutions when needed.

I believe my proficiency in React.js, combined with a strong focus on performance optimization and scalable state management, makes me a strong fit for both your team and the innovative work at your organization.

I would welcome the opportunity to discuss how my experience and skills can contribute to your projects. Please feel free to reach out at your convenience. I look forward to hearing from you.

Sincerely,

Justin Thomas

React.js Developer
